

SHENAO ZHANG

shenao@gatech.edu | shenao-zhang.github.io

EDUCATION

Georgia Institute of Technology

M.S. in ECE (Electrical and Computer Engineering), GPA: 3.81/4.00

May 2020 - May, 2022

Atlanta, GA

South China University of Technology

B.Eng. in EE (Electronic and Information Engineering, Innovation Class)

Aug. 2016 - May 2020

Guangzhou, China

University of California, Berkeley

Visiting student at the Department of EECS, GPA: 3.90/4.00

Jan. 2019 - May 2019

Berkeley, CA

RESEARCH INTERESTS

My research centers around reinforcement learning (RL), especially model-based RL. I'm interested in developing data-efficient RL algorithms that have both theoretical guarantees and strong empirical performance with application to robotic and multi-agent systems.

RESEARCH EXPERIENCE

Northwestern University

Research Intern. Advisor: Zhaoran Wang

Aug. 2022 - Present

Remote

- **First-Order Policy Gradient for Contact Dynamics** [3]: We studied the First-Order Policy Gradient (FOPG) with complementarity-based models for robotic systems that experience hard contact. We showed that the convergence and gradient variance of FOPG are closely related to the model stiffness, which is determined by the centering parameter when solving the complementarity problem. Therefore, we proposed *Contact-Aware Analytic Barrier Smoothing*. By establishing the connection between analytic smoothing and randomized smoothing, we showed that the best linear approximation of the dynamics is captured by our method, whose gradient bias can thus be upper bounded.

Georgia Tech

Research Intern. Advisors: Tuo Zhao and Zhaoran Wang

Sep. 2020 - Aug. 2022

Atlanta, GA

- **Model-Based Reparameterization Policy Gradient Methods** [2]: We established the first convergence result for model-based RP PGs, and our theory identified the smoothness of the function

approximators as a major determining factor that affects the quality of gradient estimation. Based on our theory, we proposed a spectral normalization method, which can effectively mitigate the exploding variance due to long model unrolls. Experimental results also support our theory and method.

- **Conservative Dual Policy Optimization for Efficient Model-Based RL** [1]: The provable efficiency results in previous Bayesian MBRL methods are statistically intractable in nonlinear settings since the assumption of restricted model complexity rarely holds. In practice when the model is poorly generalized, as measured by the model complexity, an exploration step can only eliminate a small portion of the model hypothesis, causing over-exploration. To solve this issue, I proposed *Conservative Dual Policy Optimization* (CDPO). CDPO optimizes an intermediate policy under a stable *reference* model and then maximizes the *expected* policy value. I proved the statistical equivalence between CDPO and posterior-sampling RL in Bayesian regret, with which the global optimality of CDPO can be concluded. Moreover, I established the monotonic policy value improvement result of CDPO to ensure efficient exploration. Experiments were conducted in tabular and MuJoCo tasks.

Tencent AI Lab

Research Intern. Advisors: Li Shen, Lei Han and Li Shen

Aug. 2019 - Sep. 2020

Shenzhen, China

- **Generalizability of Multi-Agent RL** [4]: To make RL algorithms generalizable in population-varying multi-agent systems, we proposed *Meta Representations for Agents* (MRA) that adopts multi-modal latent policies and a constrained mutual information maximization objective to discover the common strategic knowledge and diverse strategic modes. We proved that the learned policies can reach the Nash Equilibrium in every evaluation Markov game if with a sufficiently large latent space.
- **Visual Representation of Structured Data** [5]: For deformable objects, we proposed to take advantage of their natural characteristics by formulating the feature interactions in a structured manner. Our *Structure-Regularized Attention* captured informative patterns between neighborhood nodes. Higher-level contextual information can then be accessed to enhance the desired features.

South China University of Technology

Undergraduate Researcher. Advisor: Huabiao Qin

May 2018 - Dec. 2018

Guangzhou, China

- **Gaze Tracking Algorithms** [6]: We proposed gaze tracking algorithms based on projective mapping correction and gaze point compensation that work in the natural light environment.

TEACHING EXPERIENCE

Head TA of the graduate course [CS 7648: Interactive Robot Learning](#) (Fall 2021) at Georgia Tech.

SELECTED PROJECTS

Object Detection

[Project paper](#): Coarse-to-Fine Attention, advised by Bo Wu. [Related patent](#).

May 2019 - Oct. 2019

Columbia University

Cloth Simulation using OpenGL Shader

[Project website](#): ffjmmm.github.io/CS184-final/webpage, advised by Ren Ng.

Jan. 2019 - May 2019

UC Berkeley

PROFESSIONAL SERVICE

Conference Review: NeurIPS 2020/21/22, ICLR 2022/23, AISTATS 2022/23, RSS 2021, ICML 2022.

Journal Review: Neurocomputing, Transactions on Pattern Analysis and Machine Intelligence (TPAMI).

HONORS AND AWARDS

NeurIPS Scholar Award

2022

Georgia Tech Level A Premier Merit-Based Scholarship

2020-2021

SCUT Study Abroad Global Education Scholarship

2019

Second Prize in the China Undergraduate Electronics Design Contest

2018

Third Prize in the Intel Undergraduate Embedded System Contest

2018

Outstanding Freshman Scholarship (Awarded to 30 among 6,500 students)

2016
